

## Driver License Data Verification (DLDV) Service

### Summary

Driver Licenses, Driving Permits and Identification Cards (collectively, “DL/ID”) issued by U.S. Jurisdictions are regularly used as proof of identity; however, a card may be counterfeit or altered. The purpose of AAMVA’s Driver License Data Verification (DLDV) service is to provide commercial and government entities with the real-time capability to verify DL/ID information against data from the issuing agency. In summary, DLDV connects industry and motor vehicle agencies in real-time to create a uniform solution for identity verification. For a list of jurisdictions covered, please visit our [website](#).

### Description

When a DL/ID is presented as proof of identity, authorized organizations may use DLDV to verify that the attributes on the credential match the data held by the issuing agency. Real-time verification with DLDV allows the organization to verify: 1) that the DL/ID exists; and 2) whether or not the DL/ID presented is attached to the attributes on the credential.

DLDV returns a “True” / “False” indicator to the requestor for each attribute submitted for verification. A verification request may contain any or all of the listed attributes for verification:

Please note DLDV **does not**:

- 1) return to the requestor the actual data maintained by the Jurisdiction;
- 2) validate that the physical document is genuine;
- 3) provide a verification of photo or signature; or
- 4) store the verification request data or Jurisdiction response data.

|                 |                 |
|-----------------|-----------------|
| Document Number | State Code      |
| First Name      | Middle Name     |
| Last Name       | Name Suffix     |
| Street          | City            |
| State           | Zip Code        |
| Issue Date      | Expiration Date |
| Eye Color       | Height          |
| Weight          | Gender          |
